Disclosure of Data Legend: This proposal includes data that shall not be disclosed outside the Government and shall not be duplicated, used, or disclosed – in whole or in part – for any purpose other than to evaluate this proposal. If, however, a contract is awarded to this offeror as a result of – or in connection with – the submission of this data, the Government shall have the right to duplicate, use, or disclose the data to the extent provided in the resulting contract. This restriction does not limit the Government's right to use information contained in this data if it is obtained from another source without restriction. The data subject to this restriction is contained in all sheets of this submission.

Freedom of Information Act Exclusion: This document contains trade secrets and commercial or financial information of the Company which is privileged or confidential within the meaning of the Freedom of Information Act 5 USC 552(b)(4). Accordingly, such data shall not be disclosed outside the Government and shall not be duplicated, used, or disclosed in whole or in part for any purpose other than to evaluate this proposal.

TABLE OF CONTENTS

List of Exhibits and Tables.....	ii
Executive Summary	iv
1.0 Transition Approach.....	1
1.1 Infrastructure Modernization Approach [C.5, C.6.1].....	2
1.1.1 MetTel Replacement of NARA MPLS [C.5].....	2
1.1.2 MetTel's Approach to Required Technical Elements [C.6.6].....	3
1.2 Transition Strategy.....	6
1.2.1 Phase 1: Site Surveys & Transition Planning Period (Base Period) [C.6.2, L.4.1]	7
1.2.2 Phase 2: Transition and Stability [C.6.3, L.4.1]	7
1.2.3 Phase 3: Modernize Design & Migration Planning [C.6.4, L.4.1]	10
1.2.4 Phase 4: Implement WAN Optimization Strategies	12
1.2.5 Voice Network Transition [C.4, C.6]	12
1.3 Transition Plan [C.26, M.2.1].....	14
1.3.1 Transition Management Team [C.26 #1].....	14
1.3.2 Governance & Communication Management [C.26#2]	17
1.3.3 Work Plans, Processes, and Project Planning to Meet Objectives [C.25.4.4, C.26#2].....	18
1.3.4 Project Schedules [C.25.4.4.2].....	20
1.3.5 Verification Testing of Full Operational Capability (FOC) [M.2.1]	23
1.3.6 Quality Control Process and Tools [C.26#2]	25
1.3.7 Risk Management [M.2.1]	27
1.3.8 Transition Off Services [C.26#3]	29
2.0 Technical Approach [L.4.2, M.2].....	30
2.1 Understanding of Requirements [L.4.2, M.2].....	30
2.1.1 Data Network Services [EIS C.5].....	30
2.1.2 Colocated Hosting Service (CHS) [C.9].....	38
2.1.3 Voice Services [C.4, C.5].....	41
2.1.4 Conferencing Services	50
2.2 Full Service Managed Service TUCs [L.4.2, M.2.2]	59
2.2.1 Managed Network Service (MNS) [C.7]	60
2.2.2 Managed Security Service (MSS) [C.13].....	61
2.2.3 Service Related Labor (SRL) [C.25, C.25.1, C.25.1.1]	67
2.2.4 Custom Requirements for supporting CSVS [C.25.4].....	73
2.2.5 Cabling and Wiring Services (CWS) [C.22].....	74
2.3 Service Related Equipment (SRE) Strategy [C.4, C.24, L.4.2, M.2.2].....	74
APPENDIX.A: Glossary Acronyms.....	A-1

EXECUTIVE SUMMARY

The National Archives and Records Administration (NARA) can achieve a smooth and efficient phased transition to a fully integrated Software Defined-Wide Area Network (SD-WAN) based architecture for their Network and Voice Services by partnering with an award winning SD-WAN service provider that will deliver a modernized networking infrastructure.

The National Archives and Records Administration (NARA) is an independent agency established in 1934 to identify, protect, preserve, and make publicly available the historically valuable records of all three branches of the Federal government. NARA manages the Federal government's archives, administers a system of Presidential Libraries, operates museums, conducts education and public programs, provides oversight of government-wide records management activities, and provides temporary storage of other agencies' records on their behalf. NARA and its Headquarters (HQ) location supports 44 site locations nation-wide consisting of Federal Records Centers, Regional Archives, Presidential Libraries and Museums, and the Federal Register. Within these 44 locations, NARA supports more than 4,000 employees, agency personnel and contractors that directly support the NARA mission and make U.S. Government records and data available to the public.

NARA Network & Voice Services Goals

1. Seamless Transition to a Fully-Meshed Network
2. Scalable & Adaptable Managed Network Solution
3. Cost Efficiency through Managed Network Services
4. Secure/Cost Effective Network to Meet NARA Needs

MetTel understands NARA's mission and their goal for the Network and Voice Services transformation to a fully integrated Software Defined-Wide Area Network (SD-WAN) based architecture. MetTel has developed a transition approach that uses MetTel's leading SD-WAN capabilities that are native in MetTel's backbone to deliver a network that will enable NARA to provide direct access to cloud services and to add cloud security appliances that will improve remote access and direct connectivity from any user to NARA resources.

MetTel was named the winner of a Gold Stevie® Award in the Software-Defined Infrastructure category in the 18th Annual American Business Awards®. MetTel's SD-WAN is enhanced with MetTel Intelligent Automation, using Artificial Intelligence (AI) and automation to identify, report, and address network incidents, events or trouble tickets, freeing up IT staff for higher skilled work.

MetTel is the only EIS prime contractor that owns and operates a facilities-based Multi-Protocol Label Switching (MPLS) SD-WAN enabled network that supports customer networks varying from

MPLS, Virtual Private LAN Service (VPLS) and native SD-WAN at the same time. MetTel is fully capable in assisting NARA's transition from existing technologies to next generation technologies because we do this for our customers every day. MetTel has transitioned thousands of customer endpoints from MPLS technology to SD-WAN with little downtime and greatly improved efficiency in terms of network performance, ease of administration, improved reporting and network visibility, and frequently reduced operating costs

In keeping with NARA's goals, MetTel has defined a transition approach in four (4) phases, using the Request for Proposal (RFP) transition framework. Starting from the current "as-is" state and evolve in a risk mitigated manner to a "to-be" network and voice infrastructure for migration to SD-WAN adoption.
